

Getting the flexibility, functionality and visibility your fleet needs

Today's fleets need more than just acceptance at the pumps—they need robust tools and controls that allow them to efficiently manage the assets driving their business.

Over the past year, U.S. Bank Voyager delivered more flexibility, functionality and visibility to its customers by expanding card acceptance and capabilities. Now there is no comparable offering that covers Class 1–8 vehicles and provides acceptance as broad as the Voyager Network on a single card.

A single card for your entire fleet

As more organizations sport mixed fleets, more opportunities for efficiency present themselves and the case strengthens for having a single card solution and a single payment program for all vehicle types.

To meet demand, the Voyager Fleet Card now offers the robust functionality needed by heavy-duty over-the-road commercial rigs as well as the comprehensive fleet controls required for cars and light-duty trucks at gas stations and convenience stores. For the first time, all fleet classes can be managed through one card, one network and one program management platform.

The new program brings a single point of visibility and transparency to expenses. Fleet managers can access information through a single portal with a view across all vehicles and transactions while drivers can get the fuel, maintenance and services they need with a single card and nationwide network.

It's challenging enough to manage a fleet when all the vehicles are the same or similar. Mixed fleets present unique challenges. A unified program provides convenience and broad visibility to fleet expenditures and program data for the fleet manager.

Beyond coast-to-coast convenience

Through strategic partnerships, the Voyager Network now provides its customers with secure and reliable acceptance at more than 320,000 retail and private fueling sites, truck stops, electric vehicle charging stations, and maintenance and service providers.

As one of the largest fleet-fueling and maintenance acceptance networks in the United States, the Voyager Network continues to grow. Earlier this year, TravelCenters of America, operator of the TA® and Petro Stopping Centers® brands and Minit Mart®

convenience stores, announced acceptance of the Voyager Fleet Card solution at its 500+ locations. In addition, more than 5,000 O'Reilly Auto Parts stores in 47 states were added to the Voyager Network along with 53 Monro Muffler Brake locations. The new locations accept Voyager-branded cards for payment of fleet auto parts, tires and automotive services, enhancing the network's maintenance capabilities.

The network expansion goes beyond traditional retail locations, as Voyager customers now have more options to use their cards at private fueling sites not open to the general public. Corporations, government agencies and other organizations often purchase fuel in bulk for additional savings and time efficiencies. This allows their drivers to fuel their vehicles from private fueling sites, sometimes known as “cardlock” or “backyard” sites. With the Voyager Network expansion, drivers

can access thousands more private sites with their fleet cards, while fleet managers get additional controls, pricing capabilities and robust fleet data for each purchase.

Most recently, U.S. Bank teamed up with ChargePoint, the world's largest electric vehicle charging network, to offer Voyager Fleet Card acceptance at tens of thousands of its charging ports throughout the United States.

Looking to the future, Voyager will continue to find new ways to offer its customers a superior, more simplified way to manage their fleets. This includes not only growing our network for added convenience, but equipping them with the information and tools needed to improve business decisions and gain control of fleet expenses.
